

Boost Your Business with VDI and Parallels RAS

Reduce hardware dependency and improve flexibility by providing instant access to remote desktops and apps from a centralized server to any device.

ACCESS APPS FROM ANYWHERE

- Access applications, desktops and data from any device and location.
- Adopt a bring-your-own-device (BYOD) policy and switch between devices on the go.
- Less downtime increases productivity among end users and IT staff.

REDUCE COMPLEXITY AND COST

- Parallels RAS is easy to set up, configure and deploy, increasing IT resources.
- Reduce operating costs by making upgrades from a central console.
- Faster deployments—desktops can be set up in minutes, not hours.

REINFORCE SECURITY

- Centralized management makes it easy to monitor the system.
- Protect intellectual property and data privacy with multifactor authentication (MFA).
- Reduce the risk of data loss and malicious activity by locking down access.

FLEXIBLE AND DYNAMIC ARCHITECTURE

- Auto-scale and auto-provision your IT infrastructure on demand.
- Support on-premises, hybrid and public cloud deployments.
- Mix and match the technology that best suits your business needs.

"...ACSM-AGAM was excited by the ease and speed of the virtual desktop infrastructure (VDI) setup."

Fabio Calzolari, Co-Founder
